

Unboxed Heroes — Media Kit

Unboxed Heroes: Build In Public

Media Kit & Sponsorship Overview

A live-streamed indie game development show powered entirely by AI tools

theunboxedheroes.com Contact: unboxedheroes.imagination@gmail.com

The Concept

Unboxed Heroes is a mobile action game being built in public — from the first line of code to the App Store — by two people with 20+ years in the IT industry and zero prior game development experience.

The game itself started as a conversation. Not a pitch deck, not a business plan — a conversation between two engineers about an idea Parnez had in Junior High. They tried to build it before. The technology wasn’t there. Now it is.

The pipeline they have assembled to build it is something new: Claude writes the code and architects the systems. Claude also writes the prompts used in Meshy to generate the 3D models — AI tools being orchestrated by AI, with a human reviewing every step. They built a custom Blender MCP server with 200+ tools to automate the asset pipeline from model generation through to Unity import. Weave handles storyboard and video production. ElevenLabs provides voice services for characters, narration, and in-game audio. Multiple Claude Code skills and agents enforce quality standards on every asset that enters the game. None of this was off-the-shelf. They built the pipeline.

The game gets built live on Twitch, with the audience watching every design decision, voting on what gets built next, and submitting ideas that actually ship.

This is not a tutorial. It is a build log — with real blockers, real breakthroughs, and a real game at the end.

Why This Show Is Different

What most gamedev content looks like	What Unboxed Heroes: Build In Public looks like
Expert teaching polished techniques	Engineers figuring out a new domain in real time

What most gamedev content looks like	What Unboxed Heroes: Build In Public looks like
Cleaned-up demos with finished assets	Raw process — tools failing, decisions reversing
Passive audience watching someone else build	Community votes that shape actual game features
Single-tool tutorials	A custom AI pipeline built by the hosts themselves
Anyone could do it with the right expertise	Two people who tried before, waited for the tech, and built it now

This is not a show about using AI tools. It is a show about building with AI tools — there is a difference. Louie and Parnez did not license a pipeline; they architected one. They built a custom Blender server with 200+ automation tools. They built Claude Code agents that enforce asset quality standards on every model that enters the game. They built the thing, then they stream building the game on top of it.

What viewers see on stream is not every line of code from scratch. The underlying pipeline and tooling were built off-stream. What the audience watches is the game being built on top of that foundation: design decisions, new characters, new systems, new features — in real time, shaped by the community. That distinction matters. The show is about the creative and design layer, not the infrastructure. And that is exactly the layer that is most interesting to watch.

The audience is not watching people who already knew how to do this. They are watching two engineers who tried to build this game before — when the technology was not ready — pick it back up and build it now. That story has an arc. It has something to land on.

The Hosts

Louie Celli — DevOps Engineer with 20+ years in the IT industry. Leads the technical build: Unity architecture, AI workflow design, the custom Blender automation pipeline, and system integration. The game as it exists today — the asset pipeline, the Claude Code agent architecture, the custom MCP tooling — is his technical vision. This is not his first time trying to build it. It is the first time the tools have been ready.

Parnez Newbill — Support Engineer/Customer Service Manager with 20+ years in the IT industry and the origin of the idea. The game concept was his — from Junior High, carried forward, waiting for the right moment. On the show, Parnez owns all video content production: direction, editing, and delivery across YouTube, TikTok, and Reels. He is not a co-host in the background. He runs the video side of this operation, and his production instincts are what make the content land outside of Twitch.

Together: two engineers who have spent their careers shipping software, applying those same instincts to a domain that always felt out of reach — and finding out it is not.

The whole thing started with a conversation. They added AI to the conversation. The conversation became a game.

Format & Platforms

Crown Jewel — Twitch Live Streams - Weekly live build sessions (2–3 hours each) - Requests come in two ways: submitted before each show via Discord and the website (community votes on what gets built that episode), and live during the stream (real-time calls from the audience that redirect the build) - Both are real mechanics — the show has a plan going in and the audience can change it - What viewers see built live is the game layer: new characters, new systems, new features, design decisions. The foundational pipeline and tooling were built off-stream so the show can move fast on the creative work - Guest slots available: company reps, designers, community builders

Full Multi-Platform Reach

Platform	Format	Purpose
Twitch	Live (weekly)	Real-time community build
YouTube	VODs + edited highlights	Discovery, archive, tutorials
TikTok / Reels / Shorts	Clips (weekly per platform)	Viral reach, new audience acquisition
Audio Podcast	Stripped stream audio	Commute and passive listening
theunboxedheroes.com	Show notes, changelog, vote tracker	Community hub

The Community Mechanic

The Unboxed Heroes audience does not just watch — they co-create the game:

1. **Submit** — Anyone can submit a feature request, weapon idea, character concept, or story beat via Discord or the website between episodes.
2. **Vote** — At the top of each live stream, the most-upvoted ideas go to a real-time audience vote.
3. **See it built** — The winning idea gets designed and implemented that episode, on stream, start to finish.

This creates a feedback loop no other gamedev show offers: the audience watches their idea go from suggestion to playable feature in real time. That retention mechanic compounds — viewers come back every week to see if their idea won.

Target Audience

Aspiring indie developers — people who want to make a game but feel the barrier is too high. This show proves it is not.

AI tool enthusiasts — the creative-tech audience that tracks what AI can actually build today. Increasingly large, increasingly mainstream.

Gamers who want a voice — players who are tired of passive consumption and want a say in what gets made.

These groups overlap heavily with the user bases of AI creative tools — making this show a natural home for partners who want to reach power users and early adopters at the moment they are making tool decisions.

Partnership Opportunities

Title Sponsor

One partner is the official tool that makes the show possible. Every episode opens with *“Unboxed Heroes: Build In Public, powered by [Partner].”*

Includes: episode intro mention every week, logo on the website homepage and all episode thumbnails, inclusion in every show description across all platforms, and a dedicated quarterly episode built around the partner’s product.

Presenting Tool Partner

Your tool gets a dedicated *“How We Build With [Tool]”* segment in every episode where it is used — authentic, unscripted, showing real problems being solved. No ad read. Just the work.

Includes: episode intro callout, social post on stream day tagging the partner, website tools page listing, and a featured episode each quarter.

Community Partner

Co-marketing partnership. We promote your tool to our audience; you promote the show to yours.

Includes: episode outro mention, Discord server resources section, website footer listing, and mutual social amplification on key episodes.

What Partners Receive

- **Authentic demonstration** of your tool solving real problems in a live context — not a scripted ad
- **Access to an early-adopter audience** of aspiring builders who are actively evaluating tools
- **Repurposable content** — clips of your tool in action that you own and can use in your own marketing
- **Community feedback signals** — direct line to what your users actually struggle with and want
- **Co-marketing reach** across Twitch, YouTube, TikTok, Instagram Reels, and the website

Launch Timeline

Phase	Target
Sponsor outreach + show branding	Q3 2026
Pilot episode (Twitch + YouTube)	Q3 / Q4 2026
Full weekly cadence live	Q4 2026
Community Discord launch	Q4 2026

Social Channels

Platform	URL	Status
Website	https://theunboxedheroes.com	Live
Twitch	https://www.twitch.tv/unboxedheroes	Live
Instagram	https://instagram.com/unboxedheroes	Live
TikTok	https://tiktok.com/@unboxedheroes	Live
YouTube	https://www.youtube.com/@UnBoxedHeroes-c9q	Live — teaser uploaded
App Store	TBD	Pre-launch
Google Play	TBD	Pre-launch
